PRESS RELEASE

Applied Marine makes Seawork debut with new partners, Böning

Applied Marine Automation is delighted to announce a new partnership with German manufacturer, Böning.

The Plymouth based automation and control specialists have become the UK agent for Böning's products and systems and will be exhibiting at Seawork International.

Böning's screens, displays, navigation, alarm and monitoring systems are used extensively on commercial ships and workboats around the world.

David Rowe, Managing Director of Applied Marine said: "We are delighted to be working with Böning. The products are well known within the commercial and leisure marine industries and with our integration expertise we're looking forward to developing the UK market."

The Böning solutions are suitable for the initial outfit of a vessel and also for refits where electronic systems require technical updates for improved operational characteristics and expanded functionality.

User friendly touchscreen displays, integration of iPad and iPhone devices, powerful panel PCs and multiple redundant safety systems allow skippers convenient and clear access to all relevant data.

The durable and modular products are developed in accordance with classification societies. Applied Marine's electronics and integration experts will customise a package to suit your needs and provide the system configuration and commissioning.

Mr Rowe added: "Seawork International will be a great opportunity for us to exhibit the Böning systems to the commercial marine industry. We're excited to be making our debut at the show in June."

Notes for editors

Applied Marine Automation works with luxury and commercial boat designers and builders offering flexible design, commissioning and training packages for on board electronic systems. From innovative, fully customised integrated glass bridge displays and back lit panels to advanced monitoring and control, Applied Marine can provide customised solutions. Applied Marine is also a certified integrator, offering a wide range of trusted, scalable hardware and software solutions. It is a division of Applied Automation (UK) Ltd.

Böning: Established in 1977, the development and manufacture of electronic devices and systems for ship automation has always been at the heart of all company activities. Böning devices and systems can be found on more than 13,000 commercial ships and yachts around the world and also on superyachts.

Seawork International is Europe's largest commercial marine and workboat exhibition. It is being held on 14-16 June 2016 at its new permanent home at the prestigious Mayflower Park in Southampton, UK.
